iVeritas Brings order to complexity

The progressing roll out of IP/Ethernet in transport networks has determined an increase of management complexity: a 20'000 NEs nation wide mobile network generates more than 2 trillion records per year. The analysis of this information overload can be a mission impossible. Only experience and intimate network knowledge can discern the right information driving actions in a timely fashion.

iVeritas provides awareness on how your network is performing both as a whole and as discrete elements allowing you to take action, maximizing your results and using effectively your budget, where, when and why.

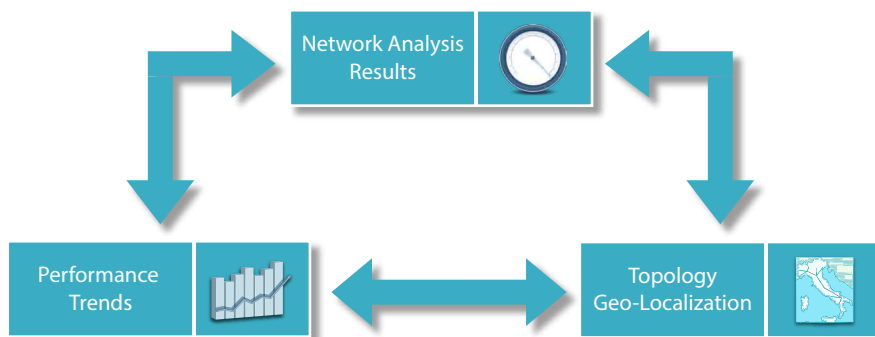

Verona, Italy

PERFORMANCE MONITORING TOOL

Records are generated by the physical network that may operate differently from what was originally planned in terms of availability and utilization. Changes may be driven by network capacity growth, by network changes or upgrades. Is your networks still meeting the planned and forecasted criterias?

Network management systems allow the operators to take a snapshot of the network. Collecting and plotting billions of unsorted data belonging to multiple performance counters, in a static view of that moment. With network changes how do you correlate the information in a single flow? How do you monitor the lifespan of your network performance?

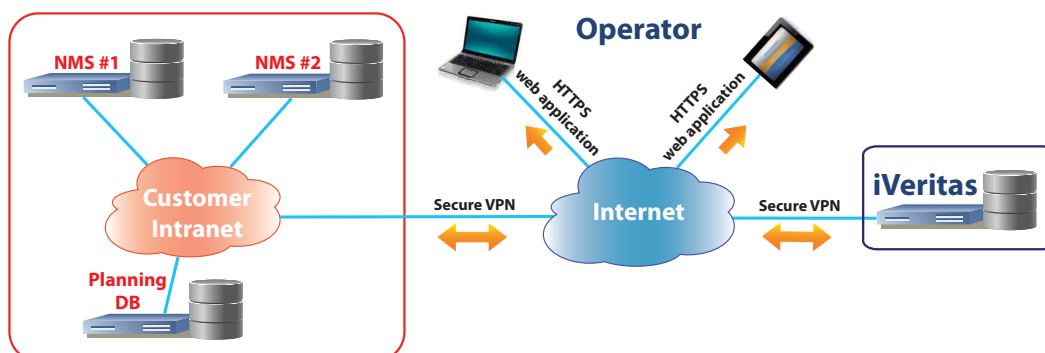

iVeritas automatically interfacs with your database offering a simple reporting structure, correlating informations and presenting the results in a clear and uncluttered view. All KPIs and thresholds are user-defined to gather, analyse and present the information of interest.

- Whole network performance result in a single glance
- Color coded links identifying which segment has crossed KPIs thresholds
- Single link performance trends in the defined period

Its clear screen views are of immediate understanding, offering value from the managers who only need to gauge the "health" of the network, to the engineer who needs to pin point the exact NE or link that needs work on.

- Designed as multivendor tool
- No training required
- User-defined KPIs
- Client can be any browser running on a PC or tabet
